

ELSE, MOVE ON

Using C Pogramming

Course : Introduction to Computing and Programming

Instructor :Adib Ahmed Anik

Department : Computer Science

Group Name : Odd Pair

Student Names : Umama Mahjabin Khan and Maesha Mehia Shoaib

Submission Date : 12.08.26

1. Abstract

“Else, move on” is a console based C application that evaluates common relationship warning signs through 10 Yes/No questions. Each question has a specific point value, and the program calculates a total score out of 110 and based on the score, the user receives a result such as green flag, proceed carefully, warning, or run. The program also saves previous results in a text file and displays funny random messages.

2. Introduction

The purpose of this project is to create a simple and interactive application while applying basic C programming concepts. Users can start a test, view previous results, learn about the project, and exit the program.

Objectives:

- Practice variables, arrays, constants, strings and functions.
- Use input and output and conditional statements.
- Apply loops to process multiple questions.
- Calculate and display a final score.
- Store previous results using file I/O.

3. Methodology

The project was developed using C. It begins with a menu where the user can start the test, view previous results, read about the project and exit. During the test, a user enters their name and answers 10 yes/no questions and each answer is assigned a point value and the total score is calculated. The score is then converted into a percentage and classified into a result category.

4. Tools and Techniques

Tools:

C Programming Language

CS50.dev

Computer System

Techniques:

Arrays and structures, strings, functions, loop, conditions, input and output, and file handling.

5. Results / Output

The program successfully accepts user information and answers, calculates a score, and displays the appropriate result, saves results to results.txt as history and allows previous results to be viewed.

```
$ make redflag
$ ./redflag

                START RED FLAG TEST
=====

Enter your name: maesha

Hello, maesha!
Answer every question with Y or N.
Be honest. We are judging them, not you.

Do they reply after more than 3 days?
Red Flag Weight: 10 points
Your answer [Y/N]: N

Do they still talk to their ex?
Red Flag Weight: 15 points
Your answer [Y/N]: N

Do they suddenly become protective of their phone when you ask to use it?
Red Flag Weight: 10 points
Your answer [Y/N]: N
```

Do they only call you after 11 PM?

Red Flag Weight: 15 points

Your answer [Y/N]: Y

Do they leave you on seen regularly?

Red Flag Weight: 10 points

Your answer [Y/N]: N

Do they cancel plans at the last minute?

Red Flag Weight: 10 points

Your answer [Y/N]: N

Do they avoid introducing you to their friends?

Red Flag Weight: 10 points

Your answer [Y/N]: N

Do they make you feel guilty for having boundaries?

Red Flag Weight: 5 points

Your answer [Y/N]: N

Do they flirt with other people and call it 'just being friendly'?

Red Flag Weight: 15 points

Your answer [Y/N]: N

Do they disappear whenever you need them?

Red Flag Weight: 10 points

Your answer [Y/N]: N

=====

RESULTS

=====

maesha's Red Flag Score:

13 / 100

Red Flag Meter:

[##-----] 13%

GREEN FLAG

Probably safe.

No major warning signs detected.

BIGGEST WARNING SIGN

Question number: 4

Red Flag Weight: 15 points

This was one of the most serious warning signs.

Would you ignore these red flags anyway? [Y/N]

Your answer [Y/N]: Y

Analysis complete:

The problem is not there anymore.

Your result has been saved to results.txt.

```
1 Name: maesha | Score: 81/100 | Result: RUN
2 Name: labiba | Score: 22/100 | Result: PROCEED CAREFULLY
3 Name: raya | Score: 0/100 | Result: GREEN FLAG
4 Name: Raisha | Score: 13/100 | Result: GREEN FLAG
5 Name: maesha | Score: 13/100 | Result: GREEN FLAG
6
```

6. Discussion

The project demonstrates how different C programming concepts can work together in one application. Arrays store questions and points, loops handle repeated questions, functions organize the program, and file handling stores previous results.

7. Challenges and Limitations

Challenges:

- Validating user input.
- Managing arrays and structures.
- Calculating scores correctly.
- Handling file operations.

Limitations:

- Only 10 predefined questions.
- Uses a text file instead of a database.
- No graphical interface.
- The scoring system is for entertainment, not a professional relationship assessment.

8. Conclusion

“Else, move on” successfully demonstrates the use of fundamental C programming concepts in an interactive application. It provides a fun experience with arrays, structures, functions, loops, conditions, strings, and file handling.

9. Future Work

Future improvements could include:

- Adding more questions.

Adding a graphical interface.

Using a database.

Adding user profiles.

Creating score graphs and detailed reports.

Developing a web or mobile version.
